

HealthGrid AI — Task Brief: Saatvik

Google Build with AI hackathon · Smart Health track · Submission ~5 July 2026 · Questions → Nishant

We are building **HealthGrid AI** — a district health command center: a live map of PHCs/CHCs in Wardha district that predicts medicine stock-outs, recommends stock transfers, and updates in realtime when a health worker speaks an inventory update in Hindi. Nishant + Claude are building the app. Your tasks below keep the build unblocked — **Task 1 is blocking the build and is needed TODAY.**

TASK 1 — Google credentials setup (BLOCKING, do first — ~20 min)

Use a Google account the team controls. When done, send the five values below to Nishant on WhatsApp (private chat only — these are secrets: never commit them to git, never post in any public server).

1A. Firebase project + Firestore

- Go to **console.firebase.google.com** → Create a project → name: **healthgrid** → Google Analytics: OFF.
- In the project: **Build** → **Firestore Database** → **Create database** → location **asia-south1 (Mumbai)** → production mode.
- Gear icon → **Project settings** → **Users and permissions** → **Add member** → add Nishant's Gmail as **Owner**.

1B. Register the web app (3 values)

- Project settings → Your apps → click the `</>` (Web) icon → nickname **healthgrid-web** → Register (do NOT tick hosting).
- It shows a config object. Copy out: **apiKey**, **projectId**, **appId**.

1C. Service account (lets the server write data)

- Project settings → **Service accounts** → **Generate new private key** → a .json file downloads.
- On your PC, run this in PowerShell (adjust the path to where the file downloaded), then paste the clipboard into the message to Nishant as one long line labelled **SERVICE_ACCOUNT_B64**:

```
[Convert]::ToBase64String([IO.File]::ReadAllBytes("$HOME\Downloads\healthgrid-xxxx.json")) | Set-Clipboard
```

1D. Google Maps JavaScript API key (needs a card)

- Go to **console.cloud.google.com** → top project dropdown → select the same **healthgrid** project.
- Menu → **Billing** → link a billing account (any debit/credit card that works internationally). Google gives **\$200/month free Maps credit**; our usage is a few dollars' worth, so nothing gets charged.
- Menu → **APIs & Services** → **Library** → search **Maps JavaScript API** → Enable.
- **APIs & Services** → **Credentials** → **Create credentials** → **API key** → copy it.
- Click the new key → **API restrictions** → **Restrict key** → **Maps JavaScript API** → Save.

Send Nishant exactly this (filled in):

```
NEXT_PUBLIC_FIREBASE_API_KEY=...  
NEXT_PUBLIC_FIREBASE_PROJECT_ID=...  
NEXT_PUBLIC_FIREBASE_APP_ID=...  
NEXT_PUBLIC_MAPS_API_KEY=...  
FIREBASE_SERVICE_ACCOUNT_B64=...(very long line)
```

Stuck on billing (card rejected)? Tell Nishant immediately — we have a map fallback, but we need to know today.

TASK 2 — Submission logistics (today/tomorrow, ~30 min)

- Log into the hackathon portal (hack2skill) with our team registration.
- Confirm and send Nishant a screenshot of: **exact deadline date + time + timezone**, and every field the submission form asks for (video length limit, demo URL, repo link, description word limits, team info).
- Verify both of you are correctly listed on the team. Fix anything odd now, not on deadline day.

TASK 3 — Impact stats research (tomorrow, ~1 hr)

Find 3–5 credible statistics for the video + README about Indian public health operations. Ideal sources: National Health Mission reports, Rural Health Statistics (GoI), NITI Aayog health index, peer-reviewed studies. For each: the stat, one-line context, and the exact source URL. Examples of what we want:

- % of PHCs reporting essential-medicine stock-outs / shortfall of doctors at PHCs.
- Patients served per PHC per day (national or Maharashtra).
- Any figure on preventable harm or cost caused by supply-chain gaps in public health facilities.

TASK 4 — Demo video prep (day 3, before recording day)

- Install and test **OBS Studio**: 1080p screen recording + clear mic audio. Do a 30-second test recording and send it.
- You may be the voice of the field worker in the demo. Practice saying this line naturally (it must be spoken, clearly, in Hindi):
"आज ओआरएस का स्टॉक 50 बचा है" ("Aaj ORS ka stock 50 bacha hai")
- Recording script will be in the repo at **docs/demo-script.md** on day 4 — Nishant will share it.

TASK 5 — Fresh-eyes testing (day 4, ~45 min)

- When Nishant sends the deployed URL: open it on your laptop AND phone. Click everything on the demo path: map → click Seloo PHC → read the AI explanation → approve the transfer → ask the copilot a question in English and one in Hindi.
- On your phone, open **/field** and do a voice update — does the map on the laptop change within a few seconds?
- Report every bug, confusing label, or slow moment with a screenshot. Brutal honesty wins hackathons.

Timeline at a glance

Today	Task 1 (credentials — BLOCKING) + Task 2 (portal check)
Tomorrow	Task 3 (impact stats)
Day 3	Task 4 (OBS + Hindi line practice)
Day 4	Task 5 (fresh-eyes test) + help record/submit
